## **EXAMINER'S AMENDMENT**

### ***Drawings***

The drawings were received on January 19, 2006. These drawings are acceptable.

### ***Examiner's Amendment***

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with James Morris (Reg. No. 34,681) on January 31, 2006.

The application has been amended as follows:

In claim 1, line 12, replace "the other terminal" with --another terminal--.

In claim 3, lines 1-2, replace "a constant current source" with --the constant current source--.

Claim 11 has been cancelled.

Claim 16 has been cancelled.

The dependency of claim 17 has been changed to depend from claim 19. In claim 17, line 1, replace "claim 16" with --claim 19--.

In claim 19, line 1, delete "The method of claim 16," and insert

Art Unit: 2878

--A method of controlling a circuit that comprises a photosensitive component and a switch, the method comprising:

providing to a control terminal of the switch, a signal having a first voltage level;

providing to the control terminal of the switch, a signal having a second voltage level; and

providing to the control terminal of the switch, a signal having a transition from the first voltage level to the second voltage level, a duration of the transition being controlled,--.

Claim 20 has been cancelled.

New claim 21 has been added to read as follows: "The method of claim 19, wherein the transition is controlled according to a determined law".

The following is an examiner's statement of reasons for allowance:

Regarding claim 2, prior art fails to teach or reasonably suggest a MOS transistor of a first conductivity type connected to a voltage source at the second level and to a control line wherein the control line is connected to the gate of the transfer MOS transistor, and a MOS transistor of a second conductivity type connected to the control line and to a terminal of a constant current source wherein another terminal of the constant current source is connected to a voltage source at the first level, in addition to the other limitations of the claim.

With respect to claims 6 and 19, prior art fails to teach or reasonably suggest the transition is controlled such that the signal has an intermediate stage of zero slop during the transition.

With respect to claim 10, prior art fails to teach or reasonably suggest a MOS transistor of a first conductivity type coupled to a control terminal, a second MOS transistor of a second conductivity type coupled to the control terminal and to a first terminal of a constant current source, a second terminal of the constant current source coupled to a voltage source that provides the first voltage level, in addition to the other limitations of the claim.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
